SUMMARY

Oracle Cloud ERP practitioner with business process analysis experience. Fifteen years in manufacturing finance, procurement and supply chain. Expert in mapping current state and future state processes into Oracle Cloud, identify gaps to find the steps where the system and the business disagree and turn the gaps into decisions, configuration changes and controls. I have experience in recovering a blocked Oracle Cloud month end close and delivered five Oracle Fusion go-lives that each closed on schedule in month one. I build the searchable knowledge library that the systems integrator and the support provider inherit.

PROCESS MAPPING AND REDESIGN

- **Document processes and flows.** BPMN 2.0 swimlanes by role with an Oracle lane, controls drawn as gates and exception paths made explicit. Level 2 process families, level 3 swimlanes, level 4 work instructions.
- **Find gaps in current state.** Evidence from tickets, Oracle exception reports, desk side interviews and the spreadsheets that run beside the system. Gap register with root cause class, business severity, fix type and owner.
- **Find people, role, ownership and training gaps.** Ticket taxonomy that separates training and process gaps from configuration and data defects. RACI per process. One owner per subledger.
- **Translate pain points into requirements.** Requirements and acceptance criteria written so a configurator can build and a tester can prove. Configuration change requests to the systems integrator with the map step attached.
- **Support readiness and adoption.** Super user networks per plant, training built from work instructions, adoption measured by ticket class after go-live.
- **Move the organization to standard, governed ways of working.** Close calendars in the Oracle subledger order, design principles agreed with process owners, versioned maps in a searchable knowledge library.
- **AI Process Knowledge Library and PPM Dashboard and Corpus.** I built and run a searchable library of BPMN process maps, work instructions and gap registers. It supports BPM because every process has one current, versioned map with a named owner. It supports BPR as a team can compare current state and future state maps and reuse past redesign decisions. I've also built a PPM dashboard. It tracks each redesign from gap to decision, owner and measured result, such as days to close. The library and the dashboard keep process changes governed and easy for the integrator and support team to inherit.

CLOSE RECOVERY IN ORACLE CLOUD

- Sequence the close in the Oracle order: Payables, Receipt Accounting and Cost Management, Projects, Assets, Receivables, Subledger Accounting, General Ledger. Clear the Period Close Exceptions Reports subledger by subledger.
- Decide the process rules that block closes: accrue at receipt or period end, match tolerances, hold ownership and SLA, work order close rules, resource rates, cost cutoff dates.
- Rebuild failing integrations on one hardened pattern with retry, replay, idempotency and monitored error handling so interfaces stop creating new exceptions.
- Run a daily close huddle during recovery. Publish days to close, open exceptions and tickets opened versus closed.

ORACLE CLOUD AND TECHNICAL PROFILE

Oracle Fusion Cloud: Financials (GL, AP, AR, Subledger Accounting), Procurement, Inventory, Cost Management and Receipt Accounting, Manufacturing, Order Management, Warehouse Management, HCM. Oracle Integration Cloud, REST and BI Publisher. Service Logistics and Depot Repair: process flow and close impact studied, not configured.

SAP S/4HANA Cloud: Finance, Supply Chain, Production Planning, Manufacturing, Distribution.

Manufacturing systems: MES, SCADA, scales and warehouse systems integrated to ERP inventory and cost transactions. 100+ RICEFW objects. 20+ OIC integrations.

Tools and AI: Lucidchart and BPMN, Miro, Excel, Oracle AI Agent Studio (certified), Claude for ticket classification and map drafting, Azure AI Search knowledge libraries.

EXPERIENCE

ERP Transformation Partner and Executive Advisor | Byrne Dairy, \$1B dairy and CPG, Syracuse, NY **2021 to 2025**

- Designed the target operating model across finance, procurement, manufacturing and supply chain. Mapped current state and future state for procure to pay, order to cash, record to report and plan to produce before configuration started.
- Decided receipt rules, match rules, hold ownership and accrual method with the business and drew them on the maps. Result: Payables closed on day two in the first month after go-live.
- Led five Oracle Fusion go-lives in five years (data migration, finance, purchasing, HCM, warehouse management). Result: every go-live closed on schedule in month one.
- Mapped MES, SCADA and warehouse events to Oracle inventory and cost transactions. Built more than 20 OIC integrations to the map. Retired eleven legacy applications. Result: 40 percent fewer cross system inventory mismatches.
- Ran super user networks and training from level 4 work instructions. Tracked adoption by ticket class after each go-live. Deployed production AI agents in Oracle AI Agent Studio for inventory reconciliation with human in the loop review, after the process was stable.

Chief Information Officer (CIO) | MDVAMILK, \$1B dairy manufacturer, Reston, VA **2017 to 2021**

- Led selection and implementation of SAP S/4HANA Cloud across finance, supply chain, manufacturing, production planning and distribution for multi site dairy operations. Owned process design and cutover for finance and supply chain.
- Established cybersecurity and compliance governance while protecting operational agility.

Vice President, Technology | SCORE, Herndon, VA **2015 to 2016**

- Built multi year technology roadmaps and governance. Oversaw an enterprise CRM implementation supporting thousands of users nationwide.

SVP, Information Management | NeighborWorks America, Washington, DC **2013 to 2015**

- Led enterprise platform modernization for more than 100,000 end users. Implemented delivery frameworks that improved transparency and outcomes.

Vice President and Chief Strategy Officer | Iconixx, \$85M global systems integrator, Bethesda, MD **2000 to 2002**

- Built the integration and reorganization strategy behind corporate acquisitions. Technology due diligence and P&L analysis. Led a 25 person software integration team.

President and CEO | Internet Information Services Inc. (IIS), Bethesda, MD **1994 to 2000**

- Founded and grew the firm to 100 professionals and more than \$20M revenue. Clients included Verizon, GEICO, T. Rowe Price and Time Warner. Sold to Iconixx in 2000.

Earlier venture: network security devices and SaaS | Product leader, US, Israel, Taiwan **Exited**

- Led four consumer network security appliances to market in 24 months. Named on an international patent with 65 claims. Successful exit.

EDUCATION, CERTIFICATION AND RECOGNITION

B.S., Technology Management, American University. · **Oracle AI Agent Studio**, certified. · **2025 Award Winner**, Oracle ERP Supply Chain Excellence.
